Nikos Kanakaris

Curriculum Vitae

Personal details

Birth	August 17, 1993
Email	nikos.kanakaris89@gmail.com
GitHub	nkanak
Link	nkanak.github.io

Short bio

- Final-year Ph.D. candidate in machine learning, graph mining, natural language processing and representation learning. BSc. in Computer Science.
- Experience both in academia and industry.
- Experience in research, machine learning projects, full-stack software development and deployment.

Professional experience

Machine Learning Researcher *December 2017 - present*

University of Patras, Full-time

Topic: Designing and implementing the data analysis pipeline, node classification, node clustering and node representation learning models for the inPOINT research project

Topic: Designing and implementing the collaboration and discourse analysis environment for OpenBioC research project

Topic: Working on an information system that monitors smart devices on cruise ships to provide maximum energy savings. ECLiPSe research project

Topic: Implementing the personalization and user profiling algorithms for MyCorridor European research project

Technologies: PyTorch, PyTorch Geometric, text classification, graph classification, representation learning, word embeddings, deep learning, data science, TensorFlow, Node.js, Natural Language Processing (NLP), cluster analysis, discourse analysis, Python, C++, PostgreSQL, MongoDB, Graph Mining, Docker, FastAPI, MongoDB, Neo4j

Senior AI Engineer *January 2019 - September 2019*

Mission-X, Full-time

Topic: Contributing to the design and implementation of the back-end system of the AI service as well as the database schema of the platform

Topic: Designing and calculating metrics and indices of the platform, including the 'value for money' metric, the 'chance of success' metric, the 'employee performance' index, the 'work balance team' index, the 'relevance of employee' and the 'allocation balance' index

Topic: Designing and implementing algorithms for prediction and automation, including automated prioritization of tasks (both for a team and each individual) based on dependency graphs and importance indices, prediction of the total project duration, provision of team insights (e.g. number of action items per user, equal distribution, average difficulty, past vs future workload), identification of highly dependent and critical tasks

Technologies: Docker, Python, Flask, Google App Engine, Google Cloud Platform, MongoDB, scikit-learn, Machine Learning, NLP, NLTK, NetworkX

Software Engineer *February 2016 - August 2017*
Programize LLC, Full-time

Topic: Converting an already existing financial model from Microsoft Excel to Python
Topic: Contributing to the automization of the process to convert Microsoft excel workbooks to Python
Topic: Implementing the back-end system for Litta mobile application
Topic: Implementing the main mobile hybrid and back-end application for Global Showcases
Topic: Adding responsive functionality to the official website for VForVacation
Topic: Contributing to the front-end and back-end internal financial application for SunPower
Topic: Implementing an Internet Explorer extension for OnionID
Technologies: Docker, Python, JavaScript, C#, C++, AngularJS, Flask, Node.js, PostgreSQL, Apache Cordova, MySQL, BHO IE, scipy, py2exe

Junior Software Engineer *November 2015 - May 2016*
Software Competitiveness International S.A. (SoftCom International), Full-time

Working for a German Automotive Industry under an NDA, area: Navigation
Topic: Implementing the middleware component that facilitates the front-end and back-end software layers
Technologies: C++, Python, Lua, XML
Tools and Standards: GIT, Jira, MISRA, Cmake, ISO 9001, ISO 27001

Junior Software Engineer *July 2015 - October 2015*
Software Competitiveness International S.A. (SoftCom International), Internship

Working for a Space Industry under an NDA, area: preventive performance monitoring
Topic: Researching for an alternative algorithm for hierarchical clustering
Technologies: C++, Java, machine learning techniques, data clustering

Freelance Personal Projects

Caper Co. *June 2017 - present*
Subject: Commercial system

Topic: Designing and implementing the back-end, the front-end and the CMS system for Caper Co., Caper Co. B2B, Food Caper Co. and Food Caper Co. B2B
Topic: Performing statistical analyses to identify and engage candidate customers
Topic: Building machine learning models to perform demand forecasting
Technologies: Angular.io, React.js, Svelte, Material Design, Django, Django REST framework, FastAPI, PostgreSQL, Docker, Braintree and myPOS payments, TensorFlow, Keras, scikit-learn

Education

Ph.D. Mechanical Engineering & Aeronautics *February 2018 - December 2022*
University of Patras

Laboratory: Industrial Management and Information Systems
Specialization: Graph Mining, Natural Language Processing, Text Representations
Dissertation title: *Graph-based knowledge representation and extraction from unstructured textual data using machine learning algorithms*
Description: Exploiting techniques and methods from the fields of graph theory, graph

mining, natural language processing, knowledge management and machine learning in order to improve graph-based text representation and graph-based natural language processing. Advancing common natural language processing tasks, such as text classification, feature extraction, feature selection and representation learning, using graph-based text representations, word embeddings, and graph neural networks.
Dissertation Technologies: PyTorch, PyTorch Geometric, Python, Neo4j, TensorFlow, Keras, scikit-learn, pandas
Keywords: Graph mining, representation learning, word embeddings, text representations, text classification, graph neural networks, evaluation and deployment of ML models, data analysis
Other activities: **Activity 1.** Worked on one EU-funded and three national research projects as a researcher where I designed, developed and deployed machine learning models and knowledge management systems. **Activity 2.** Collaborating with industrial companies under an NDA to analyze real-world data, perform market basket analysis and extract insights. **Activity 3.** Teaching assistant. **Activity 4.** Writing proposals and project deliverables. **Activity 5.** Supervision of eight undergraduate and graduate students.
Supervisor: Nikos Karacapilidis

BSc. Informatics & Telematics *September 2011 - June 2016*
Harokopio University of Athens (8.5/10, valedictorian)
Specialization: Computer Software & Systems
Thesis: *Parallelization of "burn scar mapping" algorithms - Παραλληλοποίηση αλγορίθμων χαρτογράφησης καμένων εκτάσεων σε δορυφορικά δεδομένα* [Thesis] [Presentation]
Thesis Technologies: Digital Image Processing, Parallel Programming, Python, MPI
Supervisor: Dimitrios Michail

Skills

Languages: Greek (native), English (fluent)

Programming Languages: C/C++, Python/Cython, JavaScript/Node.js/TypeScript, Julia, Java, LaTeX

Databases: PostgreSQL, MySQL, SQLite, Neo4j, MongoDB

Computer Science: Machine Learning, Natural Language Processing, Graph Mining, Graph Theory, Recommender Systems, Digital Image Processing, Parallel Programming, Embedded Systems

Technologies/Tools/Platforms: PyTorch Geometric, TensorFlow, Keras, scikit-learn, Pandas, Docker, Git, NGINX

Other: Autodesk Fusion 360, 3D printing, Electronics

Interests

natural language processing, graph mining, graph-based text representations, graph neural networks, machine learning, business intelligence, AI-guided project management, graph theory, algorithms, parallel programming, embedded systems, IoT

Other Activities

Manuscript/Book Reviewer @ Manning Publications:

- Go Web Programming, Second Edition by Sau Sheong Chang
- Julia for Data Analysis by Bogumił Kamiński
- Julia as a Second Language by Erik Engheim
- Deep Learning with Python, Second Edition by François Chollet
- Real-World Natural Language Processing by Masato Hagiwara
- TensorFlow 2.0 in Action by Thushan Ganegedara
- Transfer Learning for Natural Language Processing by Paul Azunre
- Machine Learning for Business by Doug Hudgeon and Richard Nichol
- Succeeding with AI by Veljko Krunic

Reviewer: Artificial Intelligence Review Journal (AIRE), Project Management Journal (PMJ), Applied Sciences MDPI, Information MDPI, Atmosphere MDPI, PLOS ONE, Electronics MDPI

Teaching assistant: Semester course 'Computer Programming' at the Department of Mechanical Engineering and Aeronautics, University of Patras, Greece (academic years: 2018, 2019, 2020)

Publications

1. N. Kanakaris, I. Siachos and N. Karacapilidis: Is it a bug or a feature? Identifying software bugs using graph attention networks. International Conference on Tools with Artificial Intelligence (ICTAI), 2022. (to appear)
2. N. Kanakaris and N. Karacapilidis: Predicting prices of Airbnb listings via Graph Neural Networks and Document Embeddings: The case of the island of Santorini. International Conference on ENTERprise Information Systems (CENTERIS), 2022. (to appear)
3. N. Kanakaris, D. Michail and I. Varlamis: A comparative survey of graph databases and software for social network analytics: The link prediction perspective. Book chapter for Graph Databases and their use in social media and smart cities, Science Publishers and CRC Press, Taylor & Francis Group, 2022. (to appear)
